Conference on configurability draws big crowd

ARC International reports the overwhelming success of the semiconductor industry's first-ever conference on configurability, ConfigCon Taiwan 2006.

ARC International reports the overwhelming success of the semiconductor industry's first-ever conference on configurability, ConfigCon Taiwan 2006. ARC International, Semico Research Corp and Digitimes Publications produced the one-day conference that drew over 300 SoC designers to the Ambassador Hotel in Hsinchu on 23rd February. The conference included six keynote presentations, three afternoon breakout tracks comprising 17 presentations and a very active exhibit booth section.

Partners, sponsors, and participating companies all praised ConfigCon's energy and delegate interest.

'Digitimes produces many conferences in Taiwan each year', says Colley Huang, President of Digitimes Publications, media sponsor for the event: 'Configcon Taiwan was a successful event'.

'The audience interest in the subject matter of the conference indicates a keen interest in configurability'.

Derek Meyer, Senior Vice President of Sales and Marketing at ARC International, said: 'The goal of the ConfigCon conference series is to raise awareness of the benefits of configurability at a time when the semiconductor industry is experiencing a fundamental shift away from decades old, fixed architecture methodologies'.

'The better-than-expected turnout for the inaugural conference clearly underscores the growing interest by SoC designers for configurability'.

'We are pleased with the results and grateful to the partners that joined us'.

'We look forward to the next in the 2006 lineup of ConfigCon events'.
